

# Dental Care on Demand

Emily recently graduated, she is a dentist, but she has a big student loan and doesn't have money/credit to open her office. Also, she doesn't have enough experience and reputation to run it successfully.

Karolina is a dental student ( or hygienist ), she is looking for a part time job. She not only wants to have extra cash but also would like to improve her community's health and also gain more experience.

Tony is working in a supermarket as a cashier, he has to go to work, but his daughter Debbie doesn't feel good and has a toothache. The nearest dentist is so far, and he can not take a day off.

He recently heard about a new service. He can request for a Hygienist to check his daughter. The company provides in-house check up. If the patient needs more care than the Hygienist can provide in-house, The Hygienist will refer her to a dentist.

Karolina receives Debbie's information on her mobile; she can call to Tony and arrange her visit.  
  
45 minutes later she arrives at Tony's house.

Karolina realizes that Debbie needs more care than what she can provide for her. She has access to the schedule of the local dentist who works with this service. She talks to Tony and takes an appointment for Debbie. Emily has a mobile dentistry office. It is a van. The system is received data of the patients and their appointments and gives her an optimized public location. She drives there and provides service for patients.

-  School
-  Hospital
-  Mall
-  Community/ Church

Now he can manage his and his family's health in this application. They receive information about their follow up appointments, offers, and availability of the hygiene/dentist in their location.
